Cover Letter

Dear Hiring Manager,

I am writing to express my interest in opportunities that align with my extensive experience in DevOps, System Analysis, and Software Development. With over 8 years of professional experience, I have developed expertise in build and release management, environment setup, and deployment processes, complemented by hands-on development in Python and Java.

In my current role as a DevOps Engineer at Abbott Healthcare, I manage production jobs, create ETL pipelines in Databricks, and configure Power BI dashboards. Previously, as an Associate System Analyst at NSE IT, I focused on server health monitoring, CI/CD pipelines, and automation using Jenkins and Ansible. My tenure at Capgemini as a Senior Analyst involved release management and production support, while my early experience as a Software Developer at C2L Biz Solutions honed my coding and unit testing skills.

I bring proficiency in tools and technologies such as Terraform, Power BI, Azure, AWS, Docker, Jenkins, and Git. Additionally, I hold certifications including HashiCorp Terraform Associate, Microsoft Azure Fundamentals, and specialized training in Python and Java from IIT Bombay.

I am confident that my technical expertise and problem-solving abilities make me a strong candidate for roles requiring DevOps, cloud technologies, and software development. Thank you for considering my application. I look forward to the opportunity to contribute to your team.

Sincerely,
Ganesh Vasant Sawant
